MedicineInsight - a new era in primary care data for Australia

MedicineInsight is a new GP continuous quality improvement program and source of data from primary health care, funded by the Australian Government and administered by NPS Medicinewise. Rob was one of a small number of researchers selected in 2015 to conduct experimental analyses in preparation for it becoming available to researchers more broadly. He evaluated the data on medical risk factors and influenza vaccination coverage. Dr Bernie Mullin, Client Relationship Manager MedicineInsight, will present background information on MedicineInsight, and Rob will present the results of his analysis. Dr Mullin will be available after the seminar to meet with researchers interested in accessing the data.

About Dr Rob Menzies

Rob Menzies is a Senior Lecturer at the SPHCM. He is an epidemiologist with particular interests in communicable disease control and immunisation, especially in marginalised populations. He has extensive experience using routinely collected data to evaluate the impact and effectiveness of immunisation programs. He is co-convenor of Public Health Perspectives on Indigenous Health, Indigenous Health and Wellbeing, and Immunisation Policy and Practice postgraduate courses at the School.
